Global Insolvency and Bankruptcy Practice for Sustainable Economic Development

This proceedings volume examines accounting and financial issues and trends from both global and local economic perspectives. Featuring selected contributions presented at the 19th Annual Conference on Finance and Accounting (ACFA) held in Prague, Czech Republic, this book offers a mixture of research methods and micro- and macroeconomic approaches to depict a detailed picture of the impact of global and local determinants on the globalized economy. The global perspectives versus local specifics make the volume useful for not only academics and scholars, but also for regulators and policy makers when deliberating the potential outcome of competing regulatory mechanisms. The Annual Conference on Finance and Accounting (ACFA) has

become one of the biggest conferences in the Central and Eastern European (CEE) region solely oriented to contemporary research in finance and accounting. Bringing together researchers and scholars from all over the world, the conference provides a platform in which thoughts, visions, and contemporary developments in the field of finance and accounting are discussed.

The thousands of mergers, acquisitions, and start-ups that have characterized the past ten years of business have created an increasing number of corporations in financial trouble: specifically, a shortage of venture capital or quick cash. Consequently, bankruptcy protection is now viewed as a strategic move to protect corporations from their creditors and allow them to reorganize. Bankruptcy and Insolvency Taxation, Third Edition provides the answers to the questions financial managers will have on the tax aspects of the "bankruptcy strategy."

The global marketplace brings with it significant benefits to businesses, but it also increases the risk of cross-frontier insolvencies. Although there have been steps in recent years towards creating a more uniform system, insolvency practitioners are still finding themselves confronted by the problems of widely differing insolvency regimes on an international scale. The question of access to foreign jurisdictions and recognition of foreign insolvency orders is critical if practitioners are to successfully carry out their appointed tasks. Recognition and Enforcement of Cross-Border Insolvency covers 36 countries and provides a succinct and invaluable practical guide to their policies and laws when dealing with insolvency proceedings originating in another jurisdiction. Each country chapter is uniformly structured around the following headings: ? Under general law ? Assisting legislation ? Insolvency practice ? Examples This expertly constructed approach allows the reader instant access to practical information and actual case studies while pointing out the key sources of the national rules without having to navigate through extensive amounts of time-consuming text. Recognition and Enforcement of Cross-Border Insolvency is essential reading for all insolvency practitioners, both lawyers and accountants, and all financial institutions operating within the international business arena.

The subject is introduced with a discussion on the importance of sound lending to the standing of a bank. The history of international lending is outlined, some background is given of the banks active in the field and what the author means by international lending is defined. T.H.Donaldson then goes on to describe the various analytical methods used in analysing companies and countries, distinguishing between domestic and international methods. He considers the special factors involved in lending to multinational companies and outlines the main facilities used. Specialised types of lending (project, shipping and syndicated) are also examined. Recent experience of international lending is looked at.
