Gram Negative Rod Bacteria Flow Chart - Best Picture Of ...

Staphylococcus aureus is fermentative as opposed to Micrococcus, which is oxidative. Fermentation analysis is a common step for both Gram-positive and Gram-negative bacteria identification. Add another line and shape to the flowchart. This step represents a test for coagulation, a biochemical test called coagulase.

The tests included in the flow chart often gave strong reactions; other tests not shown in the flow chart but included in Table 2 can be used for confirmation, if needed. Peptostreptococcus anaerobius and Peptostreptococcus stomatis are the only gram-positive anaerobic cocci that give a zone of inhibition of ≥ 12 mm in diameter around a sodium polyanethol sulfonate (SPS) disk.

Development of a Flow Chart for Identification of Gram ...
Chemical Gram Stain : KOH Test This is a simple test to presumptively distinguish gram-positive from gram-negative bacteria. Place a drop of 3% KOH on a clean slide. Take a loopful of the culture and thoroughly mix with KOH. Lift the loop at intervals to see if a gel is forming. Gram-negative bacteria form a viscous gel in a minute or so.
