The present book is compilation of my lecture notes on Human Physiology. This book is an outcome of an idea I got from my students, when I saw them taking print out of my lecture presentations and get them spirally bounded as book to study during whole semesters, especially examination days. The present compilation of important facts & concepts of human physiological system well supported with self-drawn suitable figures are very helpful in revising entire syllabus particularly during examination days when students are running short of time and plenty is there to study. The

present book covers almost all human physiological systems starting from Body Fluids to Muscle Physiology, Cardiovascular System, Endocrine System, Nervous System, Respiratory System, Excretory System, Digestive System and Reproductive System. Every chapter is very well supported with proper illustrations, tables and ray diagrams. Altogether about 50 illustrations are included in the book to make the mechanisms/concept easiest to understand by the students. This book shall be helpful to the students of Medical (MBBS/MD/MS), Paramedical, Basic Sciences viz. Zoology & Applied Sciences viz. Biomedical Sciences, Biotechnology, Biochemistry, Microbiology, Human Physiology, Life Sciences, Biosciences, Endocrinology, Pharmacy, Home Science, etc. I thank to readers in advance for their all love given to the book.
