This book was written for students and practitioners of engineering and social sciences, including computer, information, communication, library, business, management, and cognitive science. The topic is the relationship between people and interactive media. The book describes individuals, groups, and organizations. An understanding of people is critical to an understanding of the technology which can help people. This book was written with the help of a special computer system for authoring called the Many Using and Creating Hypertext (MUCH) system. Students and researchers from the University of Liverpool contributed to the book through the MUCH system. Classes at the University of Liverpool, both undergraduate classes and master's degree classes, have used various drafts of this book as required reading. The book has been available to the students online via the MUCH system, and the students have provided helpful feedback for the contents of the book. The author is particularly grateful for the contributions of Antonios Michailidis and Alex Birchall. Antonios's influence is most prominent in the chapters on groups, and Alex's, in the latter chapters on organizations. Claude Ghaoui coordinated the book authoring and production team, and Anthony Deakin provided finishing touches.

This book contains a selection of  
papers presented at the Computer  
Graphics and Education '91 Conference,  
held from 4th to 6th April 1991, in

Begur, Spain. The conference was organised under the auspices of the International Federation for Information Processing (IPIP) Working Group 5.10 on Computer Graphics. The goal of the organisers was to take a forward look at the impact on education of anticipated developments in graphics and related technologies, such as multimedia, in the next five years. We felt that at a time when many educational establishments are facing financial stringency and when major changes are taking place in patterns of education and training, this could be valuable for both educators and companies developing the technology: for educators, because they are often too bogged down in day-to-day problems to undertake adequate forward planning, and for companies, to see some of the problems faced by educators and to see what their future requirements might be.

Robbins Pathologic Basis of Disease.

**As the molecular basis of human disease becomes better characterized, and the implications for understanding the molecular basis of disease becomes realized through improved diagnostics and treatment, Molecular Pathology, Second Edition stands out as the most comprehensive textbook where molecular mechanisms represent the focus. It is uniquely concerned with the molecular basis of major human diseases and disease processes, presented in the context of traditional pathology, with implications for translational molecular medicine. The Second Edition of Molecular Pathology has been thoroughly updated to reflect seven years of exponential changes in the fields of genetics, molecular, and cell biology which molecular pathology translates in the practice of molecular medicine. The textbook is intended to serve as a multi-use textbook that would be appropriate as a classroom teaching tool for biomedical graduate students, medical students, allied health students, and others (such as advanced undergraduates).
